

Introduction to Deep Learning

Deep Learning is a subset of Machine Learning that uses neural networks with multiple layers to learn patterns from data.

Neural Networks

Neural networks are inspired by the human brain. They consist of input layer, hidden layers, and output layer.

Applications of Deep Learning

Deep learning is used in image recognition, speech recognition, self-driving cars, and recommendation systems.

Difference Between ML and DL

Machine Learning requires feature engineering, while Deep Learning automatically extracts features from data.
